EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael P. Straub Registration No. 36,941 on January 30, 2009.

The application has been amended as follows:

Claims **22** and **28** have been amended as follows:

Claim 22 (Currently Amended): A firewall test apparatus, comprising:

a memory;

a session signaling module for generating session signals used to initiate a communications session to be conducted through a firewall to be tested and to terminate a communications session after it has been initiated, and means for flooding said firewall with increasing amounts of session signal traffic used to initiate and terminate communications sessions;

a scanning probe generation module for generating probe signals to be directed at firewall ports;

a timing synchronization module for synchronizing operation of said firewall test

Art Unit: 2436

apparatus to at least one of an external clock source and another firewall test apparatus; and

an analysis module for determining at least a port closing delay from a session signal time and a time probe signals are detected to stop passing through a port in said firewall corresponding to an initiated communications session, and for determining at least a port opening delay from a session signal time associated with a session signal used to initiate a communications session and a time probe signals are detected to start passing through a port in said firewall corresponding to the initiated communications session.

Claim 28 (Currently Amended): A firewall test system for testing a firewall, comprising;

a memory;

a test signal generator for generating communications session initiation signals and probe signals directed at a first side of said firewall, including means for establishing a communications session through said firewall using session initiation signals prior to transmitting at least some of said probe signals, means for synchronizing test signal generation to an outside clock source, and means for flooding said firewall with session signals which trigger the opening or the closing of ports in said firewall; and

a test signal analyzer for detecting probe signals passing through said first side of said firewall to said second side of said firewall and for determining port closing delays as measured from the time the test signal analyzer

Art Unit: 2436

detects a signal used to close a port in said firewall and said analyzer ceases to detect test signals passing through said firewall, and means for synchronizing device operation with said outside clock source.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance.

Claim **2, 4, 10, 18, 22, 28** are allowed based on the following:

The prior art of record, considered individually or in combination, fails to fairly show or suggest: transmitting session initiation signals at an increasing rate through said firewall to cause the opening of ports in said firewall, measuring the effect of said increasing rate of session initiation signals on at least one of an opening and a closing delay time associated with opening a port and closing a port, respectively, in response to transmitted session initiation signals; and transmitting session termination signals at an increasing rate through said firewall to cause the closing of ports in said firewall, measuring the effect of said increasing rate of session termination signals on closing delay time associated with closing a port in response to transmitted session termination signals, in addition to the other limitations in a manner as recited in claims **2, 4 - 6, 10 - 12, 18, 19, 22 - 24, 28, 29**.

Claims **5, 6** are allowed due to allowed base claim **4**.

Claims **11, 12** are allowed due to allowed base claim **10**.

Claim **19** is allowed due to allowed base claim **18**.

Claims **23, 24** are allowed due to allowed base claim **22**.

Claim **29** is allowed due to allowed base claim **28**.

So as indicated by the above statements, Applicant's arguments have been considered persuasive, in light of the set of claims with limitations as well as the enabling portions of the specification. The dependent claims further limit the independent claims and are considered allowable on the same basis as the independent claims as well as for the further limitations set forth.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
